allure reports-

third party reporter.

steps-

```
Sublime Text File Edit Selection Find View Goto Tools Project Window Help

Alture Reports for Playwright

Alture Reports for Playwright

Installation of "allure-playwright" module

npm i -D @playwright/test allure-playwright
```

package.json has this added for allure-

```
package.json - - '--- rightAutomation
A Reporters.spec.js
                   package.jsor.

    package.json > ( ) devDependencies > 
    allure-playwright

            REYWOLUS . LI,
           "author": "",
           "license": "ISC",
           "devDependencies": {
   10
              "@playwright/test": "^1.36.2",
   11
             "allure-playwright": "^2.4.0"
   12
   13
   14
   15
```

```
9 2) Installing Allure command line
10
11 Ref: https://www.npmjs.com/package/allure-commandline
12
13 npm install -g allure-commandline --save-dev
14
15 (or)
16
17 sudo npm install -g allure-commandline --save-dev
```

add in pw config-

```
playwright.config.is - playwrightAutomation
Ф
                                                              playwright.config.js ×
     V PLAYWRIGHTAUTOMATION
                                                   retries: process.env.CI ? 2 : 0,
        A Locators.spec.js

                                                    /* Reporter to use. See <a href="https://playwright.dev/docs/test-reporters">https://playwright.dev/docs/test-reporters</a> */
         MouseHover.spec.js
        MouseRightClick.spec.js
         MultiSelectDropdown.spec.js
         mytest.spec.js
         A ParallelTesting.spec.js
                                                    reporter: [['list'],
        ▲ Pomtest.spec.js
         A RadioButtons.spec.is
                                                                   ['html'],
         A recordvideo.spec.js
                                                                   ['junit', { outputFile: 'results.xml' }],
         Reporters.spec.js
                                                                  ['json', { outputFile: 'results.json' }],
         screenshot.spec.js
                                                                  ['allure-playwright',{outputFolder: 'my-allure-results'}]

▲ screenshot2.spec.js

         Table.spec.js
         Tags.spec.js
```

output folder is optional in json, junit and allure. so we need not give the folder name where the report is generated.

```
3) playwright.config.js
reporter= ['allure-playwright',{outputFolder: 'my-allure-results'}]

(or)
npx playwright test --reporter=allure-playwright

4) Run the tests
npx playwright test tests/Reporters.spec.js
```

now we need html report form, else allure results contains encoded report.

so generate report - pass in the existing allure folder name - -o means output folder or directory then specify the new folder name and clean generate.

```
33
34 5) Generate Allure Report:
35
36 allure generate my-allure-results -o allure-report --clean
37
38
39 6) Open Allure Report:
40
41 allure open allure-report
```

to open the allure report in html form use point 6.
