pavanpw-36

Reporters

we can change the report we want either in pw config or in cmd line.

built in reporters-

list reporter-

```
playwright.config.js x

playwright.config.js x

playwright.config.js > @| <unknown> > & reporter

retries: process.env.CI ? 2 : 0,

/* Opt out of parallel tests on CI. */

workers: process.env.CI ? 2 : undefined,

/* Reporter to use. See <a href="https://playwright.dev/docs/test-reporters">https://playwright.dev/docs/test-reporters</a> */

reporter: 'list',
```

set it directly without pw config on cmd-

tick marks in report.

```
PROBLEMS OUTPUT DEBUG CONSOLE TEST RESULTS TERMINAL

□ pavan@Pavans-MacBook-Pro playwrightAutomation % npx playwright test tests/Reporters.spec.js --repo |
rter=list
```

line reporter-

nothing in reports.

```
pavan@Pavans-MacBook-Pro playwrightAutomation % npx playwright test tests/Reporters.spec.js --reporter=line
```

dot reporter-

..F

F means fail

.. means pass

```
pavan@Pavans-MacBook-Pro playwrightAutomation % npx playwright test tests/Reporters.spec.js --repo |
rter=dot
```

html reporter-

default report which we get, see it either in pw report folder or using cmd.

```
opavan@Pavans-MacBook-Pro playwrightAutomation % npx playwright test tests/Reporters.spec.js --repo 
rter=html
```

json reporter-

slightly different in config file.

```
playwright.config.js > A Reporters.spec.js

playwright.config.js > A Reporters.spec.js

playwright.config.js > A Reporters.spec.js

playwright.config.js > A Reporters.spec.js

retries: process.env.CI ? 2 : 0,

/* Opt out of parallel tests on CI. */

workers: process.env.CI ? 2 : undefined,

/* Reporter to use. See https://playwright.dev/docs/tess
//reporter: 'html',
reporter: 'html',
controlled in the controlled in th
```

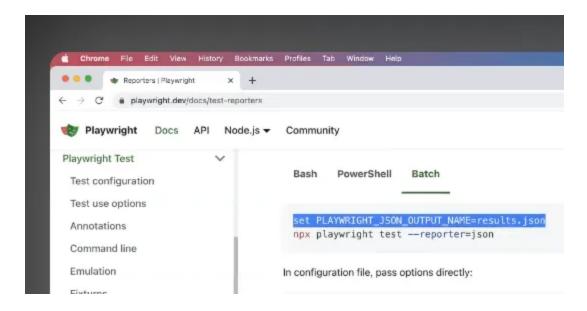

output is created at project root level.

will generate json in command line itself as we didnt specify path.-

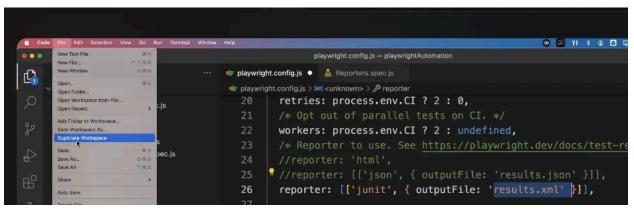

```
o pavan@Pavans-MacBook-Pro playwrightAutomation % npx playwright test tests/Reporters.spec.js --reporter=json n
```

to generate in file-

first we need to run bash command and then the report generation command.

junit reporter-

instead of json, xml is generated.

generated in console.-

```
pavan@Pavans-MacBook-Pro playwrightAutomation % npx playwright test tests/Reporters.spec.js --reporter=junit
```

set the bash command for specific location-

```
### PLAYWRIGHT_JUNIT_OUTPUT_NAME=results.xml
npx playwright test --- reporter=junit
```

add multiple reporters-

```
