pavanpw-18

nested or inner iframes

to get all the frames inside another frame-

returns array of frames.

//nested frame **const childFrames=await frame3.childFrames()**

steps-

get the main frame.

then childframes to get all child frames.

then use index of child frame to access elements.

```javascript
//
const { test, expect } = require('@playwright/test');

// steps-
// get the main frame.
// then childframes to get all child frames.
// then use index of child frame to access elements.

test('Inner frames', async ({ page }) => {

  await page.goto('https://ui.vision/demo/webtest/frames/');

  const frame3=await page.frame
({url:'https://ui.vision/demo/webtest/frames/frame_3.html'})
  frame3.locator("input[name='mytext3']").fill('welcome')

  //nested frame
//   to get all the frames inside another frame-
// returns array of frames.
  const childFrames=await frame3.childFrames()
  await childFrames[0].locator("//*[@id='i5']/div[3]/div").check() // radio button

  await page.waitForTimeout(5000);

});
```
