Keyboard Actions

await page.type('[name="text1"]','welcome to automation')

first pass in the locator then the value to be typed.

press the tab key and then release it-

//Tab **await page.keyboard.down('Tab') await page.keyboard.up('Tab')**

release one is not mandatory to write.

```
1  //
2  const { test, expect } = require('@playwright/test');
3
4  test('Keyboard actions', async ({ page }) => {
5
6      await page.goto("https://gotranscript.com/text-compare")
7
8      //await page.locator('name="text1"').fill("welcome to autoamtion");
9
10     //pass in locator and value to type.
11     await page.type('[name="text1"]','welcome to automation')
12
13     //Ctrl + A   - Select the text
14     await page.keyboard.press('Control+A')
15
16     //Ctrl + C   - copy the text
17     await page.keyboard.press('Control+C')
18
19     //Tab
20     //press tab key.
21     await page.keyboard.down('Tab')
22     //release tab key, but not mandatory.
23     await page.keyboard.up('Tab')
24
25
26     //Ctrl + V   - paste the text
27     await page.keyboard.press('Control+V')
28
29     await page.waitForTimeout(5000);
30
31 });
```
